

Audio DJ Studio API For NET Commercial Edition Bundle With Sound Editor

Audio DJ Studio API for .NET | MultiMedia Soft

.NET class for audio/video playback, mixing and playlist management

.NET custom API that adds audio/video playback, mixing capabilities and playlists management to DJs applications. Supports many audio/video formats. The use of DirectSound and ASIO allows the allocated players to have a separate control over

Volume, Tempo, Playback Rate, Pitch and Equaliser values: visual feedback is provided through embedded VU-Meter, Spectrum Analyser, Oscilloscope and Waveform display.
