Key features: - Real time control of all JP-08 parameters, both layers simultaneously when DUAL is enabled - Accurate and adjustable mapping of every JP-08 parameter (from 0..127 CC values from external MIDI controller to 0..255 internal JP values), with normal or inverse polarity, on both layers simultaneously - User assignable Velocity and Aftertouch - Supports up to 2 external MIDI controllers, for example a keyboard and a knob controller - Editor / librarian feature: patches created with JP-08 can be downloaded on the editor and saved locally on the computer as .PRM files, standard format of patches saved inside the JP (see backup/restore feature in JP manual) - Patches in .PRM format can be loaded instantaneously from computer to JP (infinite patches library); they can be loaded on both layers automatically - Editing and sound design of new patches can be done from external controller, from computer (with fine adjustment of everything) or from the JP-08 panel (supporting echo of modified parameters on both layers in real time) - Backup of all JP-08 internal 64 patches, locally saved in the computer as .PRM files, ready for a "Restore" function - Quick recall: 8 most used patches can be assigned to 8 external controller buttons for immediate recall (both layers loading supported and recommended) - Init patch function: a flat starting point patch is created on JP-08 and local panel - Randomize function: random values for every parameter are generated on JP-08 and local panel. Funny and creative - Direct and remote control of Delay, Portamento and Bender range - Built-in input and output MIDI monitor for easy mapping and discovering of external controller CC values - Free version is fully working and allows patches saving on local computer. Options disabled in free version : - instantaneous patches loading from computer (except included demo patches) - total backup limited to first 4 patches, - saving of custom CC map disabled (current settings are saved and recalled in free version anyway!) - Random patches generation disabled Everything else works!! No time limits, no registration required, just run, set MIDI configuration and have fun!
